

PROJECT REPORT (2025-2026) DIGITAL LITERACY

SUBMITTED BY: AMAN KUMAR BEHERA

REGISTRATION NUMBER: 25BAI11344

BRANCH: CSE (AIML)

FACULTY: Dr KANNAN

VIT BHOPAL UNIVERSITY

INTRODUCTION

At its core, digital literacy is the ability to **find, evaluate, and communicate information** through various digital platforms. It isn't just about knowing how to type or use a mouse; it's about having the cognitive skills to live, learn, and work in a society where communication and access to information are increasingly through digital technologies.

The Four Pillars of Digital Literacy

To truly be digitally literate, one must master several interconnected areas:

1. **Functional Skills:** The "how-to." This includes basic operations like using a word processor, navigating an operating system, or managing files in the cloud.
2. **Critical Thinking:** The "why." This involves evaluating the credibility of a website, spotting "fake news," and understanding the bias behind digital content.
3. **E-Safety and Privacy:** Understanding how to protect your personal data, recognizing phishing scams, and maintaining a healthy digital footprint.
4. **Communication and Collaboration:** Knowing how to engage respectfully in digital spaces (Netiquette) and using tools like Slack, Zoom, or social media to work with others.

Why It Matters

Digital literacy is no longer optional; it is a gateway to equity and opportunity.

- **In the Workplace:** Most modern careers require proficiency in digital tools. From data analysis to remote project management, digital literacy is a primary driver of employability.
- **In Education:** Students use digital platforms for research, submitting assignments, and collaborative learning. Without these skills, the "digital divide" widens, leaving some learners behind.
- **In Daily Life:** From online banking and telehealth to renewing a driver's license, the world is "digital by default."

TASK 1—DIGITAL LITERACY INFOGRAPHIC

For this task, I created a digital literacy awareness infographic using Canva. The infographic explains what digital literacy is and why it is important for students. It includes key topics such as safe internet practices, useful digital tools, and maintaining a professional online presence.

I used simple icons, headings, and short descriptions to make the design visually appealing and easy to understand. The goal was to ensure that anyone viewing the infographic could quickly grasp the key ideas.

One challenge I faced was balancing text and visuals. Initially, the design looked overcrowded, so I had to simplify the content and focus only on important points. This helped me improve my design and presentation skills.

Overall, this task helped me learn how to present information creatively and effectively.

TASK 2—STUDENT DIGITAL PORTFOLIO

In this task, I created and updated my profiles on GitHub, LinkedIn, and HackerRank. These platforms are important for building a strong digital presence.

GitHub is used to showcase coding projects and technical skills. I created a profile README including my basic details and learning goals. LinkedIn helps in building a professional network and presenting my educational background.

HackerRank is useful for practicing coding and improving problem-solving skills.

In the coming years, I plan to regularly update my GitHub with projects, enhance my LinkedIn profile with achievements,

and continue solving problems on HackerRank. These platforms will help me prepare for internships and job opportunities.

This task made me realize the importance of maintaining a professional and active online presence.

TASK 3—CODING %COLLABORATION PLATFORMS

For this task, I used HackerRank to complete a beginner-level coding challenge. This helped me understand basic programming concepts and improve my logical thinking.

I also created a Google Form as a Digital Literacy Awareness Quiz. The form includes five questions such as multiple-choice and short-answer questions. It can be used to test students' understanding of digital literacy. Creating the form helped me learn how to collect responses and analyze data using Google Sheets. This is useful for surveys, feedback collection, and academic purposes.

These tools are very helpful for students. HackerRank improves coding skills, while Google Forms supports collaboration and data collection. Both will be useful throughout my academic journey.

The screenshot displays the HackerRank interface for a 'Hello, World!' challenge. The browser address bar shows the URL: `hackerrank.com/challenges/py-hello-world/problem?isFullScreen=true`. The page header includes the HackerRank logo and navigation links: Prepare, Python, Introduction, and Say "Hello, World!" With Python. The left sidebar contains links for Problem, Submissions, Leaderboard, and Discussions. The main content area is divided into two sections. The left section, titled 'Problem', provides instructions and sample code. The right section, titled 'Congratulations', displays the test case results and a 'Next Challenge' button.

Problem

Check [Tutorial](#) tab to know how to solve.

Here is a sample line of code that can be executed in Python:

```
print("Hello, World!")
```

You can just as easily store a string as a variable and then print it to stdout:

```
my_string = "Hello, World!"
print(my_string)
```

The above code will print `Hello, World!` on your screen. Try it yourself in the editor below!

Input Format

You do not need to read any input in this challenge.

Output Format

Print `Hello, World!` to stdout.

Sample Output 0

```
Hello, World!
```

Congratulations

You solved this challenge. Would you like to challenge your friends? [f](#) [t](#) [in](#) [Next Challenge](#)

Test case 0

Compiler Message

Success

Expected Output

```
1 Hello, World!
```

[Download](#)

TASK 4—EMAIL ETIQUETTE & COMMUNICATION

In this task, I wrote two professional emails—one requesting an assignment extension and another applying for an internship. I followed proper email etiquette, including clear subject lines, polite greetings, structured content, and professional closing.

I also created a checklist of social media do's and don'ts to promote responsible online behavior among students.

Poor digital communication can lead to misunderstandings and create a negative impression. For example, sending informal or unclear emails to professors can affect credibility. This can be avoided by maintaining professionalism and clarity in communication.

This task helped me understand the importance of proper communication in academic and professional environments.

TASK 5—CYBERCRIME AWARENESS

For this task, I studied phishing as a cybercrime. Phishing involves tricking users into sharing sensitive information through fake emails or websites.

What surprised me most was how realistic phishing attacks can appear, making them difficult to identify. Many people fall victim due to lack of awareness.

After completing this task, I will be more cautious while clicking on links and will always verify the authenticity of emails and websites before sharing any personal information.

This task helped me understand the importance of cybersecurity and safe internet Practices.

CONCLUSION

This project helped me develop essential digital literacy skills such as creating visual content, building a professional online presence, using collaboration tools, and understanding cybersecurity.

Each task provided practical knowledge and improved my confidence in using digital platforms. These skills will be highly useful in my academic journey and future career.

Overall, this project was a valuable experience that highlighted the importance of responsible and effective use of digital technologies.
